

agilyx For Immediate Release

Agilyx invites all Portland Metro Oregon Green School members to participate in its Holiday Foam Collection Program

Tigard, OR. December 12, 2016. [Agilyx](#) introduces its first annual “Holiday Foam Collection Program” and invites all Green School members to participate. Between Thanksgiving and New Year’s Day, American’s volume of household waste increases by 25% according to the U.S. Environmental Protection Agency. An estimated 1 million tons of extra material include many items that can be diverted from the landfills. Expanded Polystyrene or EPS Foam is just one of the estimated 80% of wasted items that can be recycled. Agilyx needs help collecting that waste to put it to better use.

The company is calling for students and staff to make a difference in their communities by recycling polystyrene foam waste that is generated during the Holiday season. Schools are asked to contact info@agilyx.com to confirm their participation in the polystyrene foam collection program and arrange a pickup date. Participating schools will collect and store the polystyrene waste until the pickup date. The collected waste will be taken to the Agilyx facility where it will be chemically recycled into its most useful form.

All participating schools will be invited to tour the Agilyx facility and see first-hand how the material they collected is processed. Agilyx will lead educational tours and will show how difficult-to-recycle waste plastic can be converted into valuable commodities.
