

Agilyx Signs Off-Take Agreement with AmSty

Agreement sets off-take terms for Agilyx's new styrene monomer made from recycled polystyrene

August 3, 2017

Tigard, Oregon - [Agilyx](#) Corporation announces the signing of a supply agreement with AmSty for styrene monomer produced at its facility in Tigard, Oregon. With this agreement, Agilyx advances the commercial operation of its waste-to-styrene pyrolysis plant in Tigard, Oregon.

“We are pleased to announce this agreement with AmSty. This technology has tremendous potential to divert polystyrene waste from our landfills and return a chemically equivalent polymer to the market. Forging industry partnerships throughout this process is essential to achieve the worldwide impact that our technology promises. The deployment of our Tigard facility and our pipeline projects are important steps toward delivering a system that can be distributed globally in the coming years,” said Joe Vaillancourt, CEO, Agilyx Corporation.

Agilyx's chemical recycling technology provides the first true chemical recycling solution for polystyrene waste. The process maintains polystyrene at its highest value throughout the circular supply chain and allows for the beneficial use and reuse of this important product.

About Agilyx

Agilyx is an environmental technology and development company located in Tigard, Oregon that extracts value from difficult-to-recycle mixed waste plastic streams. The Company has developed the first full-circle system capable of recycling post-consumer polystyrene (packaging materials, foam cups, etc.) into styrene monomer, which is then used to make new polystyrene (“PS”) equal in quality and composition to the original product. The company has also commercialized a technology that converts mixed plastics to high quality VGO crude. Agilyx is working with waste service providers, municipalities, refiners, and private and public enterprises to develop closed-loop industrial solutions for mixed waste plastics.
