

## Agilyx ASA Boilerplate

Agilyx ASA is at the forefront of advanced recycling, converting post-use plastics into high-value feedstock and virgin-equivalent products. Through Cyclyx, its joint venture with ExxonMobil (25%) and LyondellBasell (25%), Agilyx supports the collection and processing of post-use plastic waste into custom-formulated, high-quality feedstock solutions for global plastic producers. Through Plastyx, its joint venture with Circular Resources (40%), Agilyx provides critical feedstock to the European mechanical and advanced recycling markets. Additionally, Agilyx markets TruStyrenyx, a polystyrene advanced recycling solution that combines its Styrenyx depolymerization technology with Technip Energies' purification process. By advancing from a linear "make-take-waste" model to a circular economy, Agilyx advances the transition to a low-carbon future.
